DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

A telephone call was placed to attorney for applicant, William L. Huebsch, on July 7, 2005. Attorney for applicant confirmed that the recitation "means mounting..." did not invoke means plus function under 35 U.S.C. 112, sixth paragraph.

Claim 1 recites "...said air cap and nozzle portions include stops limiting relative rotation of said air cap portion relative to said nozzle portion to rotation through a predetermined angle between first and second relative positions..." Prior art does not disclose "stops." For example, DeYoung et al. (6,068,203) teaches a plate 30 having recesses 42 which cooperate with wings 40 to position plates at 45 degree intervals but the mating structures 40, 42 do not prevent rotation. Therefore, the mating structures are not considered "stops." The plate 30 can be rotated 360 degrees. The mating structures merely move the air cap 12 and plate 30 along the central axis 16. Claim 1 requires that the stops limit the rotation of the air cap portion relative to the nozzle portion between the first and second relative positions which define a predetermined angle, i.e., the stops prevent further rotation beyond the first and second relative positions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
